

Inkl. Kressegment-Fräser für bessere Oberflächengüten und kürzere Bearbeitungszeiten  
Incl. Circle Segment End Mills for Better Surface Finish and Shorter Machining Time

**FRANKEN**  
*Turbine*

Fräser für die Impeller- und Schaufelblattbearbeitung  
Milling Cutters for Machining of Impellers and Turbine Blades

Der **FRANKEN Formfräser „Pagode“** wird zum Schlichten von Schaufelfußnuten und Schaufelfußprofilen eines Turbinenrotors eingesetzt. Die neuartige Spannutegeometrie ermöglicht eine höhere Schneidenanzahl und einen höheren Fräsvorschub gegenüber dem Tannenbaumfräser. Das führt zu einer spürbaren Reduzierung der Bearbeitungszeit bei gleichzeitiger Verdoppelung der Standzeit.

FRANKEN Formfräser „Pagode“ werden entsprechend den Kundenbedürfnissen individuell entwickelt und hergestellt.

The **FRANKEN “Pagode” form milling cutter** is used for finishing the grooves of blade roots and for blade root profiles of turbine rotors. The innovative geometry of the chip flute enables more cutting teeth and an increase of the milling feed compared to a fir tree cutter. The result is a significant reduction of machining time while doubling tool life.

FRANKEN “Pagode” form milling cutters are individually developed and produced according to customer requirements.

FRANKEN, der Pionier bei Kreissegment-Fräsern, vervollständigt sein Fräserprogramm für die Impeller- und Schaufelblattbearbeitung um neue Schrupp- und Schlichtausführungen mit Innenkühlung und Eckenradius „ER“.

Die Schruppausführung ermöglicht es, auch an komplexen Bauteilen und Schaufeln ein konstantes Aufmaß für die nachfolgende Schlichtbearbeitung mit einem weiteren Kreissegment-Fräser herzustellen und damit die Vorschlichtbearbeitung einzusparen. In dieser neuartigen Kombination aus Schruppen mit Vorschlichten und anschließendem Schlichten sind Zeiteinsparungen bei der Fräsbearbeitung von bis zu 50% möglich. Gleichzeitig werden signifikante Verbesserungen der Oberflächen erzielt, was zum Beispiel bei Schaufelblättern aufwändige Nacharbeit durch Entfernung von Bearbeitungsübergängen vermeidet und die Maßhaltigkeit und Formtreue wesentlich verbessert.

Das Fräserprogramm FRANKEN Turbine umfasst Vollhartmetall-Werkzeuge zur Vor- und Fertigbearbeitung von Bauteilen an Turbinen oder anderen komplexen 5-Achs-Bauteilen.

Die beiden neuen, konischen FRANKEN Turbine Torusfräser ergänzen das bisherige Fräserprogramm um weitere Ausführungen mit innerer Kühlschmierstoff-Zufuhr. Diese ermöglicht eine bessere Spanabfuhr und verbessert dadurch die Prozesssicherheit und Standzeiten. Dank einer Schruppverzahnung in Verbindung mit ungleicher Teilung eignen sie sich ideal zum vibrationsarmen Vorfräsen von Impellern, Schaufelblättern oder Integrated Blade Rotors (IBR).

Schneidstoff, Geometrie und Beschichtung aller Fräswerkzeuge sind auf schwer zerspanbare Werkstoffe, wie z.B. Titanlegierungen oder Inconel, ausgerichtet.

Fräswerkzeuge der Produktlinien FRANKEN Turbine und FRANKEN Expert sind auf Anfrage auch in kundenspezifischen Ausführungen erhältlich. Wenden Sie sich hierzu bitte an den für Sie zuständigen Vertriebspartner.

FRANKEN, the pioneer in circle segment end mills, completes the range of milling cutters for machining of impellers and turbine blades with new roughing and finishing versions with internal cooling and corner radius “ER”.

The roughing design makes it possible to produce a constant machining allowance with a circle segment end mill for subsequent finishing even on complex components and turbine blades, thus making the pre-finishing operation redundant. This innovative combination of roughing with pre-finishing and subsequent finishing enables time savings in milling operations of up to 50%. At the same time, significant improvements of the surface quality are achieved, which is the case with turbine blades, for example, where time-consuming rework by removal of machining transitions is no longer necessary and the dimensional precision and form accuracy can be substantially improved.

The FRANKEN Turbine milling cutter range comprises solid carbide tools for the roughing and finishing of components on turbines or other complex 5-axis components.

The two new tapered FRANKEN Turbine torus end mills complement the previous range of milling cutters with additional versions which integrate internal coolant supply. These additions facilitate chip evacuation and thus improve process reliability and tool life. Thanks to a roughing geometry combined with variable spacing they are ideal for low-vibration pre-milling of impellers, turbine blades or integrated blade rotors (IBR).

Cutting material, geometry and coating of all milling tools are geared towards materials which are difficult to machine, such as titanium alloys or Inconel.

Milling tools of the product lines FRANKEN Turbine and FRANKEN Expert are also available in customer-specific versions on request. Please contact your responsible sales partner for details.

# Wegweiser

**Bitte beachten:**

Die Eignung ist folgendermaßen gekennzeichnet:

- = sehr gut geeignet
- = gut geeignet

Die zugehörigen Schnittwerte sind auf den Seiten 9 bis 51 zu finden.

#### Beschichtung · Coating

#### Einsatzgebiete – Material (siehe Seite 4)

- Speziell für hochfeste Werkstoffe geeignet
- In fast allen Werkstoffen einsetzbar
- Hartbearbeitung bis 60 HRC möglich
- Zum HSC-Schlichten geeignet
- Form A: bis 45° Anstellwinkel für steile Bereiche
- Form B: über 45° Anstellwinkel für flache Bereiche

#### Applications – material (see page 4)

- Especially suitable for high-strength materials
- For almost all materials
- Hard machining of up to 60 HRC
- Suitable for HSC finishing
- Form A: up to 45° tilt angle for steep areas
- Form B: more than 45° tilt angle for flat areas

Für die Berechnung der Drehzahl n muss mit dem Durchmesser d<sub>1</sub> gerechnet werden.

In order to calculate the rotational speed n, the diameter d<sub>1</sub> has to be used.

**Präzisions-Spannhülsen-Aufnahmen FPC**

**High Precision Collet Holders FPC**

Die patentierten Präzisions-Spannhülsen-Aufnahmen FPC sind hochgenaue Werkzeug-Aufnahmen mit mechanischer Klemmung für höchste Spannkraft und Rundlaufgenauigkeit sowie mit sehr guten Dämpfungseigenschaften. Die Werkzeugspannung erfolgt mittels Spannhülsen.

The patented precision collet holders FPC are highly precise tool holders with mechanical clamping which provide superior clamping force and concentricity as well as excellent shock-absorbing properties. The tools are clamped via collets.

Das Spannen und Lösen des Werkzeugs geschieht mit einem Sechskantschlüssel, welcher seitlich den Spannmechanismus bedient – und das innerhalb weniger Sekunden. Es können alle Zylinderschäfte nach DIN 6535 oder DIN 1835 gespannt werden.

Tools are clamped and unclamped with a hexagon wrench which operates the clamping mechanism at the side – and in just a few seconds. All straight shanks according to DIN 6535 or DIN 1835 can be clamped.

Die Präzisions-Spannhülsen-Aufnahmen FPC eignen sich hervorragend zum Hochleistungs- und Hochgeschwindigkeitsfräsen. Darüber hinaus können diese auch zum Bohren, Reiben oder zur Gewindeherstellung eingesetzt werden.

The high-precision collet holders FPC are well suited for high-performance and high-speed milling. In addition they can be used for drilling, reaming and threading operations.

Für die Berechnung der Drehzahl n muss mit dem mittleren Durchmesser  $d_m$  (Messpunkt bei  $0,5 \times a_p$ ) gerechnet werden.

For the calculation of rpm (n), use the average diameter  $d_m$  (measuring point at  $0,5 \times a_p$ ).

$$n = \frac{v_c \times 1000}{d_m \times \pi} \text{ [min}^{-1}\text{]}$$

Für die Berechnung der Drehzahl n muss mit dem mittleren Durchmesser  $d_m$  (Messpunkt bei  $0,5 \times a_p$ ) gerechnet werden.

For the calculation of rpm (n), use the average diameter  $d_m$  (measuring point at  $0.5 \times a_p$ ).

$$n = \frac{v_c \times 1000}{d_m \times \pi} \text{ [min}^{-1}\text{]}$$

**Einsatzgebiete – Material (siehe Seite 4)**

- Speziell für hochfeste Werkstoffe geeignet
- Auch für Nickel-Basis-Legierungen einsetzbar
- Für die Zerspaltung von Titan-Legierungen geeignet
- Einsatz in allen Turbinenwerkstoffen möglich
- Optimiert zur Bearbeitung von Impellern und Integrated Bladed Rotors (IBR) aus Aluminium, Titan und Inconel

**Applications – material (see page 4)**

- Especially suitable for high-strength materials
- Also suitable in nickel-base alloys
- For the machining of titanium alloys
- Suitable in all turbine materials
- Optimised for machining Impellers and Integrated Bladed Rotors (IBR) made from aluminium, titanium and Inconel

Für die Berechnung der Drehzahl n muss mit dem mittleren Durchmesser  $d_m$  (Messpunkt bei  $0,5 \times a_p$ ) gerechnet werden.

For the calculation of rpm (n), use the average diameter  $d_m$  (measuring point at  $0,5 \times a_p$ ).

$$n = \frac{v_c \times 1000}{d_m \times \pi} \text{ [min}^{-1}\text{]}$$

$v_c$  = Schnittgeschwindigkeit · Cutting speed      ■ = sehr gut geeignet · very suitable  
 $f_z$  = Vorschub pro Zahn · Feed per tooth            □ = gut geeignet · suitable

- Hochleistungswerkzeug
- Mit 5-9 Schneiden
- Ungleiche Teilung
- Vibrationsarme Bearbeitung
- Innere Kühlschmierstoff-Zufuhr, Austritt axial (ICA)

- High performance tool
- With 5-9 flutes
- Variable spacing
- Low-vibration machining
- Internal coolant supply, axial exit (ICA)

N

ICA

HM

Optional

Allround

**Beschichtung · Coating**

TIALN

**Einsatzgebiete – Material (siehe Seite 4)**

- Speziell für hochfeste Werkstoffe geeignet
- Auch für Nickel-Basis-Legierungen einsetzbar
- Für die Zerspanung von Titan-Legierungen geeignet
- Einsatz in allen Turbinenwerkstoffen möglich

**Applications – material (see page 4)**

- Especially suitable for high-strength materials
- Also suitable in nickel-base alloys
- For the machining of titanium alloys
- Suitable in all turbine materials

- P 1.1-5.1
- M 1.1-4.1
- K 1.1-4.2
- N 2.1-2.8
- S 1.1-2.6
